P-BOND Type FL has a longer pot life and cures in approx. 1 hour (@ 20°C / 68°F).
Consistency: thixotropic; self levelling.

P-BOND is a new type of 2-component adhesive and is highly recommended where strong and durable elastic bonding is required. P-BOND is free of solvents and has excellent adhesion to various kinds of surfaces.

The 750 ml quantity (as shown above) is delivered in a combined package containing both components. The longer curing time of P-BOND Type FL facilitates these large area surface applications.

Approximate Consumption:

Consumption depends on the thickness of the applied layer and on the texture of the surface. For smooth even surfaces and when applied with a fine to medium serrated spatula:
0.75 to 1.00 litre per square meter or 25.36 to 33.81 fluid ounces per 10.76 square feet.

Sample Kit Contents: P-BOND Type FL component A - 1.7fl.oz/50ml
P-BOND Type FL component B - 3.38fl.oz/100ml
